

# THE 2025 AI LIABILITY RISK ASSESSMENT MATRIX

For Legal Professionals & Compliance Officers  
Version 2.0 (Effective Jan 2025)

## 1. EXECUTIVE SUMMARY & PURPOSE

The era of treating all AI output as equally risky is over. A "zero-tolerance" policy stifles innovation, while a "laissez-faire" policy invites malpractice.

This matrix provides a tiered framework for AI adoption. It categorizes legal tasks by **Liability Risk**—the probability and severity of professional negligence claims, reputational damage, or court sanctions resulting from AI error.

**Core Principle:** The level of human verification must rise in direct proportion to the **finality** of the output and the **reliance** placed upon it by third parties (courts, clients, opposing counsel).

## 2. THE RISK ASSESSMENT MATRIX

Risk Level	Task Category	Specific Liability Vector	Approved Tooling Class	Mandatory Verification Protocol
<b>LEVEL 1: LOW</b> <i>(Internal / Ideation)</i>	<ul style="list-style-type: none"><li>• Brainstorming legal arguments</li><li>• Summarizing long transcripts</li><li>• Internal memos (Draft 1)</li><li>• Translation (Gist only)</li></ul>	<p><b>Low.</b> Errors here are "process errors," not "outcome errors." Unlikely to leave the firm or damage a client's case if caught later.</p>	<ul style="list-style-type: none"><li>• Public LLMs (ChatGPT, Claude)</li><li>• Enterprise Wrappers</li></ul>	<p><b>Protocol A: Logic Check</b></p> <p>Review for coherence. No citation verification required at this stage.</p>
<b>LEVEL 2:</b>	<ul style="list-style-type: none"><li>• Client status</li></ul>	<b>Moderate.</b>	<ul style="list-style-type: none"><li>• Enterprise</li></ul>	<b>Protocol B:</b>

<b>MEDIUM</b> <i>(Client Communication)</i>	<ul style="list-style-type: none"> <li>updates</li> <li>Drafting routine NDAs</li> <li>Clause generation (Standard)</li> <li>Marketing content</li> </ul>	<p>Risk of misstating a deadline or promising an outcome. "Silent Cyber" risk if confidential data is leaked to public models.</p>	<p>Wrappers (Data Privacy Mode ON)</p> <ul style="list-style-type: none"> <li>Secure RAG Tools</li> </ul>	<b>Substantive Review</b>  Lawyer must read every word. Verify specific dates and promises against the case file.
<b>LEVEL 3: HIGH</b> <i>(Substantive Legal Work)</i>	<ul style="list-style-type: none"> <li>Drafting Case Briefs</li> <li>Contract Analysis (Risk finding)</li> <li>Statutory Interpretation</li> <li>Researching Precedent</li> </ul>	<p><b>High.</b> Risk of <b>Hallucination</b> (Fake Law) or <b>Sycophancy</b> (Bias confirmation). Errors here directly impact legal strategy and malpractice liability.</p>	<ul style="list-style-type: none"> <li><b>Legal-Grade RAG Only</b> (Harvey, Lexis+, CoCounsel, Thomson Reuters)</li> <li><b>NO Public LLMs</b></li> </ul>	<p><b>Protocol C: Source Trace</b></p> <p>Every claim must be clicked through to the primary source. "Grounding" is not truth; verify the source exists.</p>
<b>LEVEL 4: CRITICAL</b> <i>(Court / Final Opinion)</i>	<ul style="list-style-type: none"> <li>Court Filings (Motions/Pleadings)</li> <li>Final Legal Opinions</li> <li>Citations of Authority</li> <li>Settlement Calculations</li> </ul>	<p><b>Severe. Sanctions Territory.</b> Submitting fake citations or hallucinated facts constitutes "Misleading the Court" (See <i>Mata, Choksi</i>).</p>	<ul style="list-style-type: none"> <li><b>None for Final Polish.</b></li> </ul> <p>AI may draft, but a Human must finalize independent of the tool.</p>	<p><b>Protocol D: Forensic Audit</b></p> <p>Independent verification of every citation in an outside database (e.g., Westlaw/Lexis standard search) <i>not</i> using the AI tool.</p>

## 3. PROTOCOL DEFINITIONS

### Protocol A: Logic Check (The "Sniff Test")

- **Action:** Read the output to ensure it flows logically and addresses the prompt.
- **Goal:** Efficiency.
- **Warning:** Do not rely on factual assertions (dates, dollar amounts) without moving to Protocol B.

### Protocol B: Substantive Review (The "Associate Review")

- **Action:** Treat the AI output as the work of a first-year associate. You assume it contains mistakes.
- **Checklist:**
  - Are client names spelled correctly?
  - Are dates consistent with the file?
  - Does the tone match firm standards?

### Protocol C: Source Trace (The "Click-Through")

- **Context:** Used when the AI claims a fact is true based on a document (RAG).
- **Action:** You must click the citation link provided by the tool.
- **The Trap:** Does the highlighted text *actually* support the proposition? RAG tools often find the right case but hallucinate the *relevance* of a specific paragraph.
- **Requirement:** If the tool does not provide a clickable link to the source text, the output is inadmissible for work.

### Protocol D: Forensic Audit (The "Zero Trust" Model)

- **Context:** Before any document is filed with a court or sent to an external party as final advice.
- **Action:** "Air-Gapped" Verification.
- **Process:** Take the citations generated by the AI. Open a separate, traditional legal database (Clean Browser Session). Manually search for the case/statute.
  1. Does it exist?
  2. Is it good law (shepardized)?
  3. Does it say what the AI said it says?

## 4. THE "SYCOPHANCY LOOP" AUDIT

*Avoid Contributory Negligence by auditing your Prompts.*

**The Risk:** AI models are trained to be helpful. If you ask a leading question, they will fabricate evidence to agree with you.

**Prompt Self-Check:**

- **[ ] Did I presuppose the answer?**
  - *Bad:* "Find cases where latency excuses breach of contract." (Forces AI to find a case, even if none exist).
  - *Good:* "Does server latency excuse breach of contract under NY law? Provide cases for and against."
- **[ ] Did I ask for a specific number of results?**
  - *Bad:* "Give me 5 cases." (If there are only 3 real cases, the AI may invent 2 to meet the quota).
  - *Good:* "List relevant case law."

## 5. VENDOR LIABILITY CHECKLIST (ISO 42001)

*Questions to ask your Legal Tech Vendor before deployment.*

1. **Grounding:** Does your RAG system have a "citation-only" mode that refuses to answer if no document is found?
2. **Indemnification:** Does your Terms of Service include an IP indemnity clause for generated content?
3. **Data Retention:** Is client data used to retrain your foundational models? (Must be NO).
4. **Insurance:** Do you carry Errors & Omissions (E&O) insurance that specifically covers AI "hallucinations" or failure of service?

*Disclaimer: This document is for educational and governance purposes only. It does not constitute legal advice. Adherence to this matrix does not guarantee immunity from professional liability.*
